

ENGRAVING SERVICES

SLS offers a full range of engraving services that include optional paint filling and/or resin coating to suit your requirements. Our complete in house capabilities allow us to control quality and lead times from conceptual design right through to manufacture and finishing.

Services include cutting, engraving, folding, welding, paint filling, resin coating and panel finishing. Keeping all work in house makes for a better result with a faster turn around because there are less points of contact and no need for materials to be moved from one shop to the next.

Products include industrial labeling of control panels, electrical plates, safety signage, push-button legend plates, panel tags, component I.D. tags, valve tags and markers, pipe markers, badges, name and logo plates and serialised labels.

Typical Materials:

- Plastic (acrylic)
- Aluminium
- Anodized Aluminium
- Stainless Steel
- Traffolyte
- Polycarbonate
- Polyurethane Dome
- Brass
- Timber
